

AmGraft™

Introducing the latest in
Amniotic Membrane
Allograft Technology

AmGraft™ Amniotic Membrane Allografts:

Procured, processed and configured with our focus on the surgeon and the patient

Tissue Safety: Donor Selection, Screening and Testing:

AmGraft™ are recovered meeting stringent specification during donor screening and laboratory testing to reduce the risk of transmitting infectious diseases

Standards:

AmGraft™ allografts are procured and processed according to standards established by the American Association of Tissue Banks (AATB) and the United State Food and Drug Administration (FDA). All tissues are recovered under full informed consent of the planned c-section donors (represented by the mothers of the newborn children) The donors have consented to transfer of the allografts to third parties. A thorough medical exam and social history of the donor is also obtained, including detailed family history.

The donor is screened for:

- Blood type and RH Factor HTLV-1 Antibody Hepatitis Core Antibody
- HIV-1 Antibody HTLV-2 Antibody Hepatitis Surface Antigen
- HIV-2 Antibody Syphilis Screening Hepatitis C Antibody
- HIV-NAT CMV

All tests' results are reviewed prior to release of the tissue.
